

# SCARLETH ESTEVEZ

---

 scarlethevez.me  scarleth@bu.edu  201-496-0306  github.com/scarleth095  /in/scarlethevez

## EDUCATION

**Boston University** Sept. 2013 - May 2017

Bachelor of Arts, Computer Science

**Université de Grenoble** Sept. 2014 -Dec. 2014

Study Abroad Program

## SKILLS

- Python ■ Java ■ C ■ CSS
- Javascript ■ C# ■ HTML ■ PHP
- C++ ■ Ruby /Rails ■ NoSQL

## EXPERIENCE

**30 Hands Learning** Web Developer Intern

April 2016- Present

Worked on 30 Hands new website. Working with rails on the back end. Implemented/designed the pages and setting up the database for multiple users accounts, and privacy settings depending on user's role and access to certain content in the website, creating search for student's presentation, and creating filtering for presentations and courses.

**LIFARS** GNU/Linux Developer Intern

January 2016-March 2016

Working on a security focused GNU/Linux distro. Port packages to the distro. Test and secure the distro. Drive the evaluation, selection, and deployment of a variety of new technologies and tools. Help optimize system performance, working with applications, network, storage, and database and server technology .

**Exclusive Clientele Brands** Web Developer Intern

September 2015-December 2015

Helped create company website. Worked in teams and collaborated ideas on website and android app development. Worked in front end development and back end development of the company site

## PROJECTS

**Kinect Your BlackBoard**

BostonHacks 2015

This is an online blackboard. Using a Microsoft Kinect, this application will track the hand movements of a person. It will then keep track of the coordinates, draw a picture of the coordinates, and then convert this picture to text using Computer Vision. It then displays this text and allows the user to save it, along with a variety of other options.

**Best DateNite**

HackRPI 2015

Website asks for the user's locations and takes that information with the TripAdvisor API to return the top five attractions, restaurants, and hotels. Implements a friendly easy to use UI. Built with jQuery, javascript, and bootstrap.

**Rate My Blank**

March 2016 -April 2016

Website that allows multiple users to rate other users' outfits, projects, design, artwork, story, and anything a user can make into a picture or text. We used MongoDB, Angular Js, Imgur API, and Facebook Oauth, in which we took the user's info to make their profile. Search is implemented by searching tags that match the post.

## ACTIVITIES

**WTBU (Boston University's student-run radio station )**

January 2016 - Present

Webmaster \*\*\*Built new WTBU website

**BUILDS**

September 2015 -Present

Member

**Women in Computer Science**

September 2015 -Present

Member
