SCARLETH ESTEVEZ

EXPERIENCE

LIFARS: GNU/Linux Developer Intern January 2016 -Present

Working on a security focused GNU/Linux distro. Port packages to the distro. Test and secure the distro. Drive the evaluation, selection, and deployment of a variety of new technologies and tools. Help optimize system performance, working with applications, network, storage, and database and server technology .

Exclusive Clientele Brands: Web Developer Intern October 2015- January 2016

Created company website. Lead team of front end developer interns. Worked in teams and collaborated ideas on website and android app development. Worked in front end development and back end.

PROJECTS

Kinect Your BlackBoard: BostonHacks 2015

This is an online blackboard. Using a Microsoft Kinect, this application will track the hand movements of a person. It will then keep track of the coordinates, draw a picture of the coordinates, and then convert this picture to text using Computer Vision. It then displays this text and allows the user to save it, along with a variety of other options.

Best DateNite: HackRPI 2015

Website asks for the user's locations and takes that information with the TripAdvisor API to return the top five attractions, restaurants, and hotels. Implements a friendly easy to use and visual pleasing UI. Built this website with jQuery, javascript, and bootstrap.

ACTIVITES
